SasSea Wraps

Step-by-Step Instructions

Simply make a ponytail with the center loop 1, spiral wrap the shorter bungee to the end of the ponytail and tie off with loop 2, then spiral wrap the longer second bungee down the ponytail in the opposite direction and tie off loop 3.

To remove, simply release the end loops 2 and 3 and the cords practically unravel themselves. Next remove loop 1 releasing the hair. If used with texturizer, curl defining spray or damp hair let to dry, you'll reveal beautiful perfectly formed beach waves.

Step-by-Step

1. Brush through wet or dry hair. If your hair is layered or very silky, consider using a hair texturizer or curl definer.
2. Using the center loop, make a ponytail at your desired height and head position. Hold the *SasSea Wraps* hair tie at the base of your ponytail and give the two cords a tug to ensure they're not caught in the ponytail loop.
3. Bring the ponytail and SHORTER cord over your dominant hand shoulder. Bring the LONGER cord over the opposite shoulder to keep it out of the way.
4. Holding your ponytail with your less dominant hand, use your dominant hand to wrap the shorter cord around the ponytail beginning at the top and spiraling down to the end.
5. While wrapping, ensure the cord is snug but not too tight. Tie off the loop at the bottom of the spiraled hair. Adjust the wrap to achieve your desired look and comfort level.
6. Repeat steps 4 & 5 wrapping the longer cord around your ponytail in the OPPOSITE direction and tie off at the bottom.

Tips & Tricks

- After making the ponytail with the center wrap, gently pull down on the cords to ensure they are not caught in the ponytail loop.
- Experiment with tension and distance between wraps. Your goal is to have the cord loop end at the bottom of your wrapped ponytail with about 2 inches of hair remaining to tie-off.
- Use your index finger on the hand holding your ponytail to hold the latest spiral in place as you work down your ponytail.
- Option: Wrap the longer cord around your ponytail in the SAME direction to create a 'spiraled' look as opposed to a 'braided' look.
